Please stop killing our planet with us. We have been fine for centuries upon centuries without the use of this computerized destruction. There was only so much freshwater that the human body has the ability to utilize and sustain our societies. Please do not let the construction of something so unnecessary destroy that limited water supply. As someone in their 20s, I want to grow up in a world where we're not fighting a war over freshwater I want to live a life that is pure, helps our world, and ensures that everyone has equitable rights to access freshwater.
