

NA NA

The approval of this air permit would be a disastrous end to clean air, water and quality of life in New Mexico, especially those who would be living near the proposed site. Thousands of people living near data centers nationwide have already seen life-altering effects to their living situations. This includes pollution to the air and water in surrounding neighborhoods and businesses, and not to mention the noise pollution that heavily effects those who may live especially close to these giant centers, causing these residents and families to live their lives without clean water and resources in their homes, or having to relocate somewhere that provides said resources in their homes and businesses that they pay for. Please help your community and do your duty by listening to NM residents who are urging you, not to follow through with Project Jupiter.
