Dear NMED staff,

I am in my early 20s and I'm this writing because I am worried about the hazards and dangers that Project Jupiter poses to the citizens, wildlife and, in general, everyone. I am submitting this comment to urge the New Mexico Environment Department to reject Yucca Growth Infrastructure, LLC's air permit application for the YGI Microgrid in Doña Ana County.

Growing up I've always cared deeply about the environment and the impacts us humans have on our Earth, and with every year, technology is getting more advanced every day, most in a way that harm our environment. With the creation of this mega AI Centre, the impacts will only worsen negatively globally. I am concerned about my future which will only become more and more of a struggle every year because of global warming. And I am sure you are already aware that AI uses tons of water to cool the data centres down. This water is very precious and valuable to many and should be preserved as there's only a certain amount of clean water that we have on this Earth.

This project is concerning for many reasons:

Still, it will produce a great amount of greenhouse gas and toxic pollutants.

This technology that keeps getting taken advantage of generates toxic waste. The procedure for handling this waste is still not precise.

This fuel cell technology system hasn't ever been tried at this level.

The air of surrounding communities will be heavily impacted by this project.

I plead that the NMED reject YUCCA Yucca Growth Infrastructure, LLC's air permit application for the YGI Microgrid. I ask the department to hold a bilingual public hearing near the Santa Teresa community, so that residents can learn about the risks associated with fuel cell technology.

Please take this into consideration,

Thank you.
