

Teresa Campbell

Project Jupiter must NOT be allowed in Doña Ana County, or New Mexico! #1 We are the desert in severe persistent drought and do not have the water required to properly support the functioning of a data center. #2 Bloom Energy has a history of dumping hazardous waste. We want to ensure no contamination of soil, air or water occurs, and this is unavoidable with data centers. #3 Resulting air emissions of various chemicals and particulates that would further degrade our air quality which already is often hazardous to people like myself with COPD and the people with asthma like many children who I cared, as a school nurse for, in GADSDEN schools. #4 Excessive noise is unacceptable to both the population and the wild land/ecosystem. #5 The promise of jobs has proven to be wildly false, initially a good number but very few permanent jobs. #6 The public needs reliable studies to be publicly shared with the voters who should have a say what comes into our region. This project is clouded by history of misleading the public and likely lying intentionally.
