I would like to say that Project Jupiter is a waste of resources that could be funneled to more beneficial things that help both people and the environment surrounding them, e.g conservation of environments like the desert, and efforts to stop climate change, instead of propagating AI that hurts the environment and the active public health and safety of people, and goes against NMED's core mission entirely- "To protect and restore the environment and to foster a healthy and prosperous NM for future generations."

if NMED goes through with the permit, their credibility decreases, and people will trust them less because they're actively going against their core mission, which is just hypocritical of them in itself.
