

Alyssa Padilla

Please do not approve any permits for projects related to data centers we already have one in Los Lunas. There has already been talks of expanding that project as well. New Mexico has done enough for data centers. We have to make decisions on technology that are centered around people, and our environment. More data centers means a massive commitment to energy, water and loss of human jobs just to keep it running. Why would that ever be a good thing for the state of New Mexico, please put us first above the needs of corporate billionaires. Ai was meant to help people with resumes and answer silly questions. Why are we building massive facilities for now, what and how will Ai benefit us? It won't. It's robbing us of our human experience.
