I am writing as a concerned resident because I believe protecting our environment should come before corporate profit. While technology and economic development are important, they should never come at the cost of our planet, our air quality, and the health of our communities. Climate change is already affecting people across the country, and approving a project that could produce millions of tons of greenhouse gas emissions each year sends the wrong message about our priorities. I am also concerned that this fuel cell technology has never been used at this scale and that there are still unanswered questions about how the toxic waste it generates will be managed safely. Families living nearby deserve clean air, transparency, and confidence that their health will not be put at risk. Future generations should not have to deal with the environmental consequences of decisions made today simply because they are financially beneficial to a private company. For these reasons, I respectfully urge the New Mexico Environment Department to reject Yucca Growth Infrastructure, LLC's air permit application for the YGI Microgrid. I also ask the department to hold a bilingual public hearing near the Santa Teresa community so residents have the opportunity to fully understand the project and voice their concerns before any decision is made. \*\*Sincerely,\*\* \*\*Anonymous\*\*
