

Rex Valentine

Dear NMED staff,

My name is Rex . I live in australia, and I am writing because I am concerned about the risks and harms Project Jupiter poses to New Mexicans. I am submitting this comment to urge the New Mexico Environment Department to reject Yucca Growth Infrastructure, LLC's air permit application for the YGI Microgrid in Doña Ana County.

I just turned into an adult, I don't want the world I live in to be more polluted, I don't want my water tainted. I don't want animals to lose their habitats, I don't want resources to be drained for the sake of some data center that ultimately will do far more harm than good.

The project's proposed fuel cell powered grid is concerning for many reasons:

It would still produce a high level of greenhouse gas and toxic pollutants.

This technology generates toxic waste, and the process for handling this waste is still unclear.

Fuel cell technology or a centralized waste system has never been tried at this scale.

Surrounding communities' air will be severely impacted by this development.

I urge the NMED to reject YUCCA Yucca Growth Infrastructure, LLC's air permit application for the YGI Microgrid. I ask the department to please hold a bilingual public hearing near the Santa Teresa community, so that residents can learn about the risks associated with fuel cell technology.
