

## John Armstrong

We don't really believe any of Oracle's and your claims of how expedient this hyper-exploitive endeavor is, I just ask that you GET YOUR WATER AT THE EXPENSE OF AREA FARMERS AND COW FARMERS. In NM, they've always been able to "cow" (purchase) any legislators and county boards of supes, for the last 2 centuries, that get in their way. Nearly all human occupied land worldwide ultimately ends up in the hands of farmers and cow farmers. Check out England and Kansas high up in Google Maps - they're around 90% crop trapezoids, squares, rectangles, and circles - one big farm each.
