

Savannah Steadman

For years now I've watched Ai tear down communities and overall the ecosystem of America. not only is Ai horrible it is mainly the "people" behind it, these "people" try and justify poisoning the air by 1. Ai is "helpful", 2. there money, there Choice. The whole idea of Ai was created for MONEY like everything else in this world. YES Ai can be helpful to people with disabilities, trouble speaking, hearing or even Ai that can help you cook food. But in no world should we have have a data center the size of half a football stadium. An estimated 10 million tons of carbon dixiode will be polluted in our air, I want you to really let that sit in 10 million tons of carbon dixiode.
