Large data centers release carbon dioxide into our atmosphere, they use up clean drinkable water and destroy the homes of communities that live near them by emitting awful sounds and harmful chemicals near residents. We sincerely hope that Ai companies will either stop creating a harmful product all together, or create a new better product that doesn't destroy our living spaces, one that would be worth buying, that is. Otherwise it is our duty to fight against them and shut them down, for safety of ourselves and lives of future generations. We ask for public to be allowed to comment and review the air quality permit for additional 60 days so that community members can participate equitably, that the air quality permit should be denied due to Bloom Energy's history of illegal dumping of harmful waste, in case of permit not being denied there should be a public hearing at Saint Theresa in both English and Spanish with an option to participate virtually. Approving this permit would be environmental racism as citizens of Doña Ana county are disproportionately impacted by environmental pollution.
