

Avery Blair

I am adamantly opposed to the project Jupiter data center and all partnering infrastructure. I am a proud NM resident and work with local farmers and ranchers as staff at the Taos Land Trust. We are all extremely worried about drought conditions. We don't have acequia water. Temperatures are rising and snow fall/ rainfall is declining. Our state is currently on fire. Rising temperatures add even more stress to plants, animals and trees. I have a bachelors degree in Environmental, Soil and Water Science. Many farmers I work with are quitting growing food. Ranchers are selling their cattle because there isn't enough water. Fires are burning 30 miles from my home. We cannot afford to be using ANY water towards a data center that consumes exorbitant amounts of FRESH DRINKING WATER when our local food chain is crumbling due to drought.
