

James Longmire

Greenhouse gas emissions from Project Jupiter are estimated to exceed those of Albuquerque, Las Cruces, and Santa Fe combined. Why is this project even considered for approval? We need to be fighting climate change not supercharging it. And for what? A massive data center for AI slop videos or social media? Don't sell out our future, our tenuous climate and water table for this affront to humanity. Don't foreclose on your own children's future. If you approve this project, you will be consigning every New Mexican to a doomed future. And for what? 1500 construction jobs? That will probably mostly go to a firm in TX? Do the right thing. End project Jupiter now.
