

Caryss Hathorne

No billionaires project should supersede the will of the people. We are crying out to you to stop the madness stealing our water and polluting our air. Our ancient traditions, our native plants are unique in the world and will be destroyed if the data centers are permitted to exist. We already struggle with air pollution when the fires turn the sky red every year. Prevent Bloom the opportunity to have this permit as they have been irresponsible with it in the past and will cause pollution because they being they can get away with it. We already see the effects in the farms and in the drinking water but add to that the drain on our water resources that would be these projects, and our state will inevitably burn. It will be our forests and towns, our campgrounds and parks, our farmland and rivers gone. The first to be affected as always are the rural communities especially reservations and pueblos; do you want to continue the systemic oppression of these peoples or will you stand up for them and all of us? Stop this project immediately or we will be facing the end of New Mexico. It is not too dire to say that every one of us including the council members making these decisions and their families will be devastated by the wrong choice in this scenario. Do better by us and give us a fighting chance at a future.
