I would rather leave out who I am or where I am, but I ask that you reject the Yucca Growth Infrastructure's air quality permit. With everything else happening to the earth, I don't think it's a stretch to say rejecting this project is common sense. We, as humans, do not need AI. From personal experience, AI only damages and destroys. Unrestricted access to AI causes students to cheat on tests and assignments, therefore the students become illiterate and feel like they don't have to learn anything, because they rely on AI to do it for them. This permit should be denied as Bloom Energy's history of illegal and hazardous dumping. If this permit is not denied, a public hearing in Santa Teresa, with the option open for the English and Spanish to participate. Thank you,
