I have concerns opposed against Project Jupiter due to it's risks and harms thrown against New Mexico. I'm commenting this in hopes of the New Mexico Environment department to reject Yucca Growth Infrastructure, LLC's air permit application. If said Project gets accepted It'll be concerning as New Mexico's Environment Department has the goal of protecting and restoring the environment for future generations. That will be contradicting and will bring more danger to everyone no matter the age. I'm concerned for the health of the hispanic children whose high-school and elementary school is located within five miles of the site. What shall happen to those children if both climate and health will be at risk if said Project is accepted? This project can and will destroy the climate, it'll result to nothing more than a dead earth nobody will survive anymore. It will cause more greenhouse gas pollution than three of New Mexico's largest cities combined. If the permit doesn't get denied, I sincerely ask the department to hold a bilingual hybrid public hearing near the Santa Teresa community so residents can learn of the risks associated with fuel cell technology .
