

Ana Brouwer

I am deeply disturbed by the decision to disregard our community's health and future sustainability by allowing a data center in our already drought-stricken area. This project will bring very few short-term benefits and very dire long term effects. If we don't have enough water in our area, property values will go down. Growth in our area will collapse. Our already arid landscape will become even more hostile, especially for small children and families. I have small children and this irresponsible decision will likely impact their quality of life with its disastrous environmental impacts. It will accelerate climate change.

Why should billion dollar companies receive tax breaks for something that will hurt our community? Stop Project Jupiter! Voters will not forget who allowed this to happen.
