I'm not from new mexico but this will affect everyone in the world so I feel I have to voice opinion too. I don't think this is a good idea. A data center that big will use up a lot of water. We already have a limited water supply. When will rich people learn that money isn't everything. After we run out of water and destroy the earth that money won't have any value. You can't eat money. The public should be given more time to review and comment. Do NOT accept the air quality permit application. A public hearing is needed.
