

Grace M

I don't live near where the data center is being built but I know what the effects will be on the people who do. I care too much about my fellow man to not speak out for them. Building this data center will harm vulnerable communities. People will face health problems and water scarcity. Nobody should have to live without clean water, especially for the sake of something that doesn't benefit anyone except large corporations. Humans can live without AI data centers; they cannot live without clean air and fresh water. I beg of you not to build this data center and put innocent lives in jeopardy.
