Please do not continue to build this Ai data center. It does nothing but take desert land to many animals for 1. It's going to pollute our air and take our water when we already struggle for water in this desert heat. Our generation and future generations have to breathe toxic air. All just because of the internet and Ai. That is not important. Being outside in the sun with no polluted clouds of trash in the air but a beautiful sun with clouds and nature touching our skin as it should be. Please don't build the data center. We can build more opportunities than this. Open more store or family activities if people want jobs and this to do. Please think of the people and future generations. Don't build the center!!
