

Lise Baker

I am strongly AGAINST the building of this plant in our state. This massive and dangerous building will use valuable resources that our plant and and our state cannot spare to power technology they no one needs at a time when we should be lowering our power needs. Communities all over the country have seen the massive and destructive impact that data centers have had in their areas including noise, air and water pollution, as well as the destruction of the natural landscape. Not here. Not anywhere. No water for AI. Not one drop. Our land is not up for grabs to out of-state corporate interests. This project should be halted immediately.
