I am a pleading for the denial of project Jupiter and the end of data centers building. These power plants will leave absolutely detrimental effects on our environment and will only further the harm of climate change and global warming. With only three years left on the climate clock, I believe it is imperative to work toward solutions instead of escalating damages that will soon be irreversible. As a young person who still has lots of time left on this Earth, I am heartbroken to know my worries waking up each morning will be if I have clean drinking water for my family that day. There is so much beauty in the nature that we are destroying and the animals that we are killing. I know it is essential for everyone to work together to fight for this Earth that has provided so much for us. These power plants are invasive species. Not only to ecosystems and the nature that has been on this planet before our creation, but also to humans.

New Mexico Environment Department should give the public an additional 60 days to review and comment on the air quality permit so community members can participate equitably.

The air quality permit application should be denied outright given Bloom Energy's history of illegal dumping hazardous waste. Approving this permit would be government-sponsored environmental racism directed at residents of Doña Ana County.

If the permit is not denied outright, a public hearing needs to be held in Santa Teresa, in both English and Spanish, with an option to participate virtually.
