

Kiera smith

I do not support the development of this data centre as it's outcome will further push the earth into its own demise. The heat is rising, and people are dying because of it. Such a large area could be benefitted by other things that serve it's community rather than ruining the wildlife around it, destroying their habitats, the air quality, and adding pressure to the already struggling climate. We already face many issues to do with our earth, and exasperating the problem is the last thing we need. To continue with this project is to agree to the detriment of our planet, and acknowledge that you're allowing it to fall. This won't just affect the global population. Everything lives on earth and has a right to do so, ai does not experience the world. We do.
