

Mars Taylor

Hello, I am writing as a concerned resident of the state of New Mexico. As we are experiencing intense UV radiation, wildfires, and progressive drought that threatens the safety and longevity of our families, lands, and food security. I am extremely concerned about the decision to approve the construction of this project, which will undoubtedly accelerate the destruction of what air and water we do have.

I would like to request a 60 day extension be applied to the comment period for this project. This is not so much to ask, considering the extensive impact of these decisions on the health of generation, and it being such a major drain on resources we **actually** need, unlike a data center. As we are dealing with a lack of polluter accountability in other sites around the state, why would it make any sense to approve a permit to a company like Bloom with a track record of illegal dumping? To approve this would be a clear dereliction of your duty as a quality control body.

The chemicals that will undoubtedly be spilled are known to stop or slow oxygen to the brain and hearts of real human beings, humans with families who love them, children who were born to live free and happy lives. It would just be basic decency to allow a public hearing and look such people in the eyes before rushing to slap approval on a project for the sake of laziness, or greed, or whatever motivates the hearts of those who support this project. Do the right thing please. Do not approve this project, hear from the people, and extend the time for the people to understand what a Goliath is at our door step.

Thank you,
MC Taylor
