

## Pricilla Lopez

As a born and raised New Mexican, I am strongly against Project Jupiter. This project is not good for the environment for the people and for our state AI data centers take hundreds of gallons of water. We are already in a drought. The real grand is dry. I have lived here my whole life and I've never seen completely dry two times in a Calendar year. Not to mention that AI data centers affect the and will rise temperatures by at least 2°C. We are already a hot state with rising temperatures. We don't need an AI data center adding to that. AI is not ethical and not fit for New Mexico.
