

Emma Terry

I, a New Mexico citizen, firmly oppose Project Jupiter's entire campaign. I do not believe this data center should be permitted to be built at all. At a time when the water systems and ecosystems are already stressed, adding an enormous power and water consuming infrastructure will certainly have dire consequences and ultimately cause more harm than any of the temporary good Projects Jupiter is claiming to bring. Due to bloom energy's history of environmental negligence and illegal dumping, there is no reason to approve their air quality permit. Additionally, I request that the public be given an additional 60 days to review and comment on the air quality permit.
