

Emily Maturo

My name is Emily . I was born and raised in Albuquerque and I am writing because I am concerned about the risks and harms Project Jupiter poses to New Mexicans. I am submitting this comment to urge the New Mexico Environment Department to reject Yucca Growth Infrastructure, LLC's air permit application for the YGI Microgrid in Doña Ana County.

As a lifelong resident of New Mexico, it's become an increasing concern that those in power continue to be susceptible to power and greed over understanding the basic science behind the climate catastrophe and the will of the people, especially our indigenous community who is loudly against any and all construction of data centers nation wide. It's THEIR land and always will be.

The project's proposed fuel cell powered grid is concerning for many reasons:

It would still produce a high level of greenhouse gas and toxic pollutants.
This technology generates toxic waste, and the process for handling this waste is still unclear.
Fuel cell technology or a centralized waste system has never been tried at this scale.
Surrounding communities' air will be severely impacted by this development.

I urge the NMED to reject YUCCA Yucca Growth Infrastructure, LLC's air permit application for the YGI Microgrid. I ask the department to please hold a bilingual public hearing near the Santa Teresa community, so that residents can learn about the risks associated with fuel cell technology.

Sincerely, Emily
