i am deeply concerned at the possibility of Project Jupiter proceeding and wholly opposed to this or any data center being constructed in New Mexico. while they are paying many people to canvas, creating many misleading ads about how they will care for water and public infrastructure and create jobs, at best they will offer some short term jobs and then leave a devastating long term impact on our aquifer and community. they are a dangerous company that will hurt our state in the long term if allowed to proceed, as has been the case in other water limited communities where data centers have been constructed.
