

## Michaela Dolly

I grew up in Las Cruces, NM (Doña Ana county) and now live in Albuquerque. Please deny the air quality permit to Project Jupiter and otherwise disallow this project to continue despite the "riches" they entice our community with that they will provide jobs and economic boost. These are empty promises. In reality, this project serves to support replacing humans and human thought with machines. The threats their massive data center poses to our air, water, soil, environment, noise level, climate, and society are deeply concerning and need to be more thoughtfully considered.

We live in a scarce and delicate ecosystem that already faces so many challenges and threats simultaneously. This data center is not human-centered, it is tech- and big profit-centered and provides no profound or meaningful invention as to how we can move toward an eco-friendly future with sufficient water, clean air, and fresh food for our community. This is disappointing considering better technology exists to sustain our future, yet they don't care to pursue it for interest in profit above all.

Please uphold NMED's commitment to New Mexico and consider the wellbeing of your neighbors, farmers, teachers, healthcare workers, firefighters, and many more whose families have inhabited these lands for generations and want to see this land thrive, not fall victim to corporate buy outs that seek to push us and our beautiful wildlife out of our unique and stunning southwestern paradise.

Please allow an additional 60 days for the public to review and comment and please seek to disregard bot-generated or otherwise falsified comments. Please provide a public hearing in Santa Theresa in English and Spanish with a virtual option if the permit is not denied.  
Thank you.
