

John MacTavish

I am opposed to Project Jupiter, and I call upon NMED to outright reject this proposal and application.

Granting a permit to emit over 10 million metric tons of CO₂ annually violates NMED's mission to protect public health and prevent air quality deterioration, disproportionately harming BIPOC and low-income communities. Not to mention, solid hazardous waste will also be produced by this data center. Considering Bloom Energy's poor history of illegally disposing hazardous waste, among other things, gives every reason as to why NMED should reject this application.

The amount of pollution will be extremely damaging to the health of the women, men, and children who inhabit New Mexico. The massive amount of sound pollution will do the same. It will destroy the health of many, and for many it will be irreparable. The repercussions of allowing this project to become reality will be next to irreversible and will haunt the land and its people for many generations to come. Nobody in New Mexico wants this monstrosity of a data center here, nor do we harbor any respect for those with power who may allow it to exist. In any case, they will likely lose the support of those who allowed them to be there in power in the first place. Do not allow the adults and children of now and the future suffer just so that these companies can make continue to stuff their rotting pockets.

With as much respect as you'll deserve after making your decision,
-John S. MacTavish
