

Taylor Warner

I vehemently oppose Project Jupiter as it is completely misaligns with the values of New Mexico. Putting a data center in the desert will endanger the land, the water, and the living things there not to mention in the entire state. If this data center is approved I hope that those who approve it are ready to face the dire consequences of their actions, and speak to the lives touched and hurt by it. This data center is not a win for us, it is a step in the completely wrong direction.
