

Sara Delonti

Hi, I live in Los Angeles and I am asking that you deny Yucca Growth Infrastructure's permit. I am a young adult and I think it's insanity that the question of whether we should have massive data centers or not is even a question. What do we need generative A.I for anyway? We're humans. We can create anything we put our minds to, it's how we're programmed. The fact that we feel the need to have robots do things for us is insane. Having this permit passed is going to help kill our planet. Once the world is gone, there's no one to blame but ourselves. Our air will be poisoned, our clean water will be gone, our animals will go extinct. I will not stand for this. Do not pass the permit. It shouldn't even be considered to pass. Make the right choice—the choice that will save humanity and hopefully the world. We still have time to make a change. Personally? I don't want "when I grow up" to turn into "if I grow up".
