

## Alaina Macias

Please do not approve this air permit or any further permits for the Yucca Growth Infrastructure LLC. The data center they are proposing will push Doña Ana County and New Mexico, an already and increasingly dry state, into further climate crisis with the amount of water and other natural resources it will need to utilize to simply keep the lights on. It will also impact the health and well being of the residents of Doña Ana County, as we've seen that the water quality available to residents only worsens over time and their homes are taken away from continued expansion. No data center is worth harming children, families, and the community that call New Mexico their home. Please deny this request.
