

## Zachary Aquino

I strongly oppose Project Jupiter. This company, and others like it, has a documented history of lying, cheating, and stealing to build its data centers. This project offers zero real benefit to New Mexicans. We're already in the middle of a constant water crisis, and I fear what my nieces and nephews will inherit 50 years from now, after Project Jupiter has drained everything it can from us. The jobs it brings are temporary and won't move New Mexico forward once construction ends, what's left? These facilities are notoriously loud, running 24/7, disrupting both communities and wildlife. They're also proven incapable of operating a true "closed loop system" they will bleed us dry. Several states are already suing on that basis alone. Please consider the long-term. Our state is beautiful, but it's also struggling and it doesn't deserve to be used and discarded for its resources. We're better than this cheap gimmick.
