Project Jupiter is detrimental to the environment. New Mexico already has limited water. The Rio Grande River is actively drying up and will be even more so at risk due to Project Jupiter. The people of New Mexico need water to survive and the communities depend on it. Project Jupiter has many negative effects on the climate. Project Jupiter will cause large amounts of air pollution, dry up the surrounding sources of water and will generate a large amount of hazardous waste and release greenhouse gas emissions greater than the largest 3 cities in New Mexico combined. Project Jupiter is overall detrimental to the communities of New Mexico. If projects like this will continue eventually everyone will suffer. Everyone. We have never needed AI before, we didn't need data centers of this size before, we don't need them now.

Approving this permit would be government-sponsored environmental racism as residents of Doña Ana County are already disproportionately impacted by environmental pollution. For years, Doña Ana County has been called a 'nonattainment' zone— this means our air quality does not meet federal government rules.

New Mexico Environment Department should provide the public with an additional 60 days to review and comment on the air quality permit so community members can participate equitably.

Deny the air quality permit application, given Bloom Energy's history of illegal dumping hazardous waste.

If the permit is not denied, a public hearing needs to be held in Santa Teresa, in both English and Spanish, with an option to participate virtually.
