

Lote Pavloviča

Im voting against this project cause there is no planet B and this project will kill our planet and the life on it and make it unliveable i mean its already proved that it wont be no good to our nature so how are we even allowing this project. Please don't kill our nature and the earth for our future generations. Im still a teen so i have a whole life ahead of me and i already know that when i grow up i want to travel and heal the world so please dont take this chance away for me and not just for me for future children let them see the true beauty of the nature cause if you do this many species will be at risk of extinction many beautiful animal species that deserve to live cause this is their home too. Yes i might not be perfect myself using ecogpt sometimes which is still ai or using transport that produces carbon emissions but if we all try to atleast lessen our daily impact to the nature we could live for a lot longer on a healthy and a beautiful planet. I know im just some teen writing a paragraph that probably wont make a difference but i really hope that enough people get together to stop this cause this will truly endanger our earth and its living organisms including us humans so please stop this, fight for our earth, be better, make a change cause there is so much beauty in the world. Wherever you are im asking you to just look out the window and just take a deep breath, hear the sounds youre hearing around you maybe its cars in the distance maybe its birds chirping or just nothing absolute peace and quiet and i want you to really feel what your hands are feeling or if there is a bug crawling on you or your clothing how it touches your skin and what you taste in your mouth maybe youve just eaten and its a delicious meal youve had but when you feel all these remember youre alive, youre here, you're breathing, seeing, hearing, touching and tasting, as you breathe the blood in your veins keeps flowing, so i just want you to remember youre alive, make a change.
