

Krystal Zaragoza

New Mexico is a unique state with few resources, but what little we have we make it work for all of our community members. Project Jupiter is not for our community. It is a money grab with pointless results. All research shows that data centers are currently losing money (no return on investments) while creating endless noise, water and air pollution in the communities they are built. We must not let outsiders bring in environmental destruction to our state. Deny their air quality permit! Their gas emissions will still be damning to the air quality in New Mexico.
