

Anonymus Anonymus

I do not support project Jupiter. The building of this data center will greatly affect the lives of those who live around it and their ability to access clean water. By building this data center, you are knowingly destroying the lives of thousands of people for the purpose of feeding your own greed and selfishness. The public should be given more time (60 days) to comment on the air quality in their area, so everyone has equal opportunity to participate. Bloom Energy should not receive an air quality permit, given its history of illegally dumping hazardous waste. Additionally, approval of this permit would be environmental racism on the part of the government. Doña Ana residents are already disproportionately affected by pollution. If the permit is granted, there should be a public hearing in Santa Teresa, conducted in both English and Spanish and with the option to participate virtually, so everyone is able to voice their opinion on a change that directly impacts them.
