

## Leyla Porras

To whom this may concern, Project Jupiter will detrimentally hurt the environment of New Mexico. New Mexico has a diverse landscape that is already struggling through a drought. Water in NM does not need to be wasted on a ridiculous center that is there to collect the data of New Mexicans and not provide anything positive to the people of NM. Water is a precious resource to NM and if anyone deserve the water in NM, it's New Mexican farmers not a data center. STOP SHOVING AI IN OUR THROATS. Water is a finite resource that shouldn't be wasted on something as silly as AI. We have already seen the awful things that AI is doing to our youth, our environment and the truth that the people have in our government.
