

Karla Sofia Bautista Proaño

Please think of our sustainable future, the future of billions of people, of billions of animals, living and sentient creatures. If you continue with all this we young people and animals will have no chance of growing. We need nature, we live of nature, and not because we commercialize with it, but because we have need it to survive since all our journey started. It is not fair for animals, plants, etc to loose their home and die just because of human greed. Even if you do not care of all that, what will you do when everything is just dirt around? You would not be able to make more money if that happens. I'm 17 years old, my brothers are barely entering their teenagehood, there are people on this planet that were born just this day, it is not nice growing just to see how rotten the world is becoming, and how, we ourselves, put in danger our home and beings that live alongside us, we want to live in a place of harmony, love, HEALTH for everyone and anyone equally. I some day want to have a family, and my kids to be able to see a green world, a peaceful world where they don't have to worry about climate change, polluted air, no water, and many more problems we are now facing. I am asking from the bottom of my soul, please take action in order to stop Jupiter's Project, protect our nature, animals and future. We can live without AI, we will be better without it, right now we are dependable empty shells, make it change for your kids.
