As someone who lives in Santa Teresa, I would like my voice to be heard as I have stood against project jupiter in the past and will continue to do so. As my community was not given adequate time to understand and review what exactly project jupiter is. Not only this but my community has been fighting for clean and safe drinking water since I was a kid only. Now clean water is being used as a leverage so that we support this project. A project mind you that will most likely make the water worse. And now they also want to put our air quality at risk. No, my community deserves better.
