Project Jupiter will have devastating effects on the environment and our people. The permit that is being requested needs to be denied. We are already seeing the impacts on the environment with the construction, imagine how much worse it will get when the center is running. It will dry up the communities water supply, release fumes/chemicals/gasses into the air while not helping to reduce any air pollution already there, take massive amounts of energy to run, generate a hum that will drive all wildlife away and cause mental and physical health issues in the surrounding communities because not everyone can afford to leave. We do NOT NEED data centers to live. we DO NEED clean running water and quiet environments to live. The rapid construction of data centers is concerning and disgraceful that the humans and animals nearby are not thought about, that the impact they will have are not thought about, that the developers are only thinking about the potential profit and the cheapest way to get to it. Data centers do not make enough profit to be worth all the damage they do. Stop the construction and restore the environment!

New Mexico Environment Department should give the public an additional 60 days to review and comment on the air quality permit so community members can participate equitably.

The air quality permit application should be denied outright given Bloom Energy's history of illegal dumping hazardous waste. Approving this permit would be government-sponsored environmental racism directed at residents of Doña Ana County.

If the permit is not denied outright, a public hearing needs to be held in Santa Teresa, in both English and Spanish, with an option to participate virtually.
