

Avellana Jackson

I am a concerned citizen asking that you please deny Yucca Growth Infrastructure's air quality. AI data centers are nothing short of entirely destructive to humans, animals and our ecosystem. The benefits of AI data centers are far outweighed by the drawbacks. The damage created will be irreversible. Humans, animals and our ecosystem will thrive without AI, that is a known fact. However, all of the above are guaranteed to suffer with the surplus of AI data centers being built. The Jupiter data center in New Mexico is one of the largest AI data centers to date and will contribute massively to habitat loss and water loss for miles surrounding it. Is the well being of families, animals and in the grand scheme our society worth the possible financial gain data centers may give? Families, parents, children, our youth, are depending on your integrity. Our survival is in your hands and if more data centers are built, our blood will be too.
