Project Jupiter is an act against humanity and nature. This project should not continue (it shouldn't have even been approved) to protect our chances of recuperating from damages of all other data centers already built. We don't need ai. We don't need data centers sucking the earth dry. We don't need the noise pollution caused by these data centers. We don't want any of it. We never have. The voices of the people are much more important than the greed of the rich. Don't allow this to continue. Don't contribute to the destruction of humanity. The earth will only stand for so much more before you are condemned for your greed. We will stand against your destruction.
