

Phillip Graves

To the staff of the NMED,

I am writing to strongly urge that you reject the Yucca Growth Infrastructure, LLC-YGI Microgrid Air Quality Construction Permit Application. The exploitative nature of this project is clear and the repercussions will last for generations. Not to mention the falsified comments of support flooding this comment area, which is meant for genuine replies. In truth, nobody but those who will profit from this project and the harm it brings want it to be accepted. New Mexico does not need or want AI Data Centers. Furthermore, with Bloom Energy having such an exploitative and illegal history, there is no reason to trust the vague information given about the waste this Data Center will produce and how it will be managed.

I implore you to reject Project Jupiter and everything associated with it.

Sincerely,
Phillip Graves
