I will preface by saying that I am not an expert. But I am know for a fact that I am so tired of hearing how our country is continuously ruining in our environment when it is becoming increasingly clear that climate change is real and happening faster than ever because of our actions. I hear from countless people that we do not AI and we most definitely do not want data centers. So why does it continue to shoved down our throats? I want every single person behind this project to think for one second. Place money and power aside and for once, think about the impacts this will have. I'm so scared about our future the world that we will leave behind for generations who didn't ask for these problems. I don't really have much else to say so I will leave the following for you to consider:

- The public should be given an additional 60 days to review and comment on the air quality permit so community members can participate equitably.
- The air quality permit application should be denied given Bloom Energy's history of illegal dumping hazardous waste.
- If the permit is not denied, a public hearing needs to be held in Santa Teresa, in both English and Spanish, with an option to participate virtually.
- Approving this permit would be government-sponsored environmental racism as residents of Doña Ana County are already disproportionately impacted by environmental pollution. For years, Doña Ana County has been called a 'nonattainment' zone— this means our air quality does not meet federal government rules.
