

Mikayla Thompson

AI data centers are dangerous and harmful to our environment. We do not need any kind of structure that will destroy the environment, use up water supplies that people rely on, increase climate temperatures, and create scarcity. This is yet another ploy to line the pockets of the elite and diminish resources for everyone else. We only have one planet it is imperative that we take care of it. Any corporation that says AI data centers are safe and necessary are lying, they do not care about anything other than money.
