

Amirah Lockett

Project Jupiter is another project that prioritizes the wealthy in a guise of "innovation" that will have a negative effect on the environment. Placing Project Jupiter in an area with already existing air quality issues will only exacerbate these problems. We have to deny the air quality permit application. The public should have 60 days to review and comment on the air quality permit. If the permit is not denied, a public hearing must be held in Santa Teresa. If this permit is approved, it would be a government sponsored act of environmental racism. We do not need anymore data centers.
