

yahya Hadad

Most people do not support AI data centers. Including this one, this AI data center will be more harm than good. And a lot of jobs coming from the AI data center is only temporary for construction. If completed this AI data center will take more jobs than I could have ever given in return. This doesn't even go into environmental cons like how carbon emissions will be through the roof in the area ruining the air quality. Or even with minimal water usage with the size of the AI data center this could prove disastrous for the community and the climate.

I do not support this ai data center please do what you can to stop this from being built!
