

## Brittany Andes

I strongly oppose the proposed AI data centers associated with the Yucca Growth Infrastructure project.

These facilities would place significant demands on local resources while providing questionable benefits to existing residents. Large scale data centers consume enormous amounts of energy and water, increase industrial development, and can permanently alter the character of surrounding communities.

I urge decision makers to reject any proposals that would allow AI data centers as part of the Yucca Growth Infrastructure project. The long term environmental and community impacts outweigh any potential benefits.
